The Aqueduct™ tools enable users to measure, map, and mitigate water risks around the world with its open-source, and high-resolution platform. It uses multiple data layers to display water risks at any given location. Current water risks can be compared to those in the future, to visualize trends for optimistic, pessimistic, or business-as-usual climate and growth scenarios.

This is a hard task not not easy to solve. If you really want an exact result, copy paragraph by paragraph for your PDF viewer into a text file and check it with the wc -w tool. The reason why not to use pdftotext in that case is: mathematical formulas may get also into the output and regarded as "words". (Alternatively you could edit the output you get from pdftotext).
