Introduction: This dictionary is an aid to the readers of Muslim philosophical works that are in Arabic. It includes most of the terminology that was developed by Muslim philosophers in their works and the terms that they borrowed -and sometimes translated- from Greek (Hellenistic), Syraic, Persian and Indian philosophical works.

### **Dictionary of Islamic philosophical terms**

During the Golden Age of Islam, especially during the 9th and 10th centuries, mathematics saw many important innovations building on Greek mathematics. The most notable achievement of Islamic mathematics was the development of algebra. Other notable achievements of the Islamic period are advances in spherical trigonometry and the addition of the decimal point to the Arabic numeral system.

In science, a multiple is the product of any quantity and an integer. In other words, for the quantities a and b, we say that b is a multiple of a if  $b = na$  for some integer n, which is called the multiplier. If a is not zero, this is equivalent to saying that  $b/a$  is an integer.. In mathematics, when a and b are both integers, and b is a multiple of a, then a is called a divisor of b.
