

DISEASES VOLUME 5 IMMUNE SYSTEM TO MULTIPLE SCLEROSIS

diseases volume 5 immune pdf

More than 80 diseases occur as a result of the immune system attacking the body's own organs, tissues, and cells. Some of the more common autoimmune diseases include type 1 diabetes, rheumatoid arthritis, systemic lupus erythematosus, and inflammatory bowel disease.

Atopic dermatitis and psoriasis: two different immune diseases or one spectrum?

Atopic dermatitis and psoriasis: two different immune

Allergies, also known as allergic diseases, are a number of conditions caused by hypersensitivity of the immune system to typically harmless substances in the environment. These diseases include hay fever, food allergies, atopic dermatitis, allergic asthma, and anaphylaxis. Symptoms may include red eyes, an itchy rash, sneezing, a runny nose, shortness of breath, or swelling.

Introduction. In 1987, Ishino et al discovered unusual DNA repeats of unknown function in the genome of the bacteria *Escherichia coli*. 1 Later, Mojica et al identified these same types of repeats in other microbes and termed these to be Clustered Regularly Interspaced Short Palindromic Repeats or CRISPR.^{2, 3, 4} The CRISPR sequences were eventually found to act as an adaptive bacteria immune ...

Postural orthostatic tachycardia syndrome (POTS) is characterized by orthostatic intolerance and a rapid increase in heart rate. People with POTS often have hypovolemia (low blood volume) and high levels of plasma norepinephrine while standing, reflecting increased sympathetic nervous system activation. Approximately half of affected people have a small fiber neuropathy that impacts their ...

When symptoms occur, how long do they last? Symptoms of hepatitis A usually last less than 2 months, although 10%–15% of symptomatic persons have prolonged or relapsing disease for up to 6 months (9–13). What is the incubation period for hepatitis A virus (HAV)?

Hepatitis A Questions and Answers for Health Professionals

Viral hepatitis is a term commonly used for several clinically similar yet etiologically and epidemiologically distinct diseases. Hepatitis A (formerly called infectious hepatitis) and hepatitis B (formerly called serum hepatitis) have been recognized as separate entities since the early 1940s and can be diagnosed with specific serologic tests.
