x This phase II study tested the hypothesis that the dose of consolidation RT can be reduced from 30 Gy to 20 Gy in diffuse large B-cell lymphoma. All patients (n=62) were in a complete metabolic response by PET-CT after chemo-immunotherapy. Bulky disease was present in 40%. Five-year local control using 20 Gy was 98%.

On plain X-ray a Chance fracture may be suspected if two spinous processes are excessively far apart. A CT scan of the chest, abdomen, and pelvis is recommended as part of the diagnostic work-up to detect any potential abdominal injuries. MRI may also be useful. The fracture is often unstable.. History. It was first described by G. Q. Chance, a radiologist from Manchester, UK, in 1948.

Polymyositis is a type of inflammatory myopathy, which refers to a group of muscle diseases characterized by chronic muscle inflammation and weakness. The muscles affected by polymyositis are the skeletal muscles (those involved with making movements) on both sides of the body. Although the disease can affect people of all ages, most cases are seen in adults between the ages of 31 and 60 years.
