Electrostatics is a branch of physics that studies electric charges at rest.. Since classical physics, it has been known that some materials such as amber attract lightweight particles after rubbing.The Greek word for amber, ????????, or electron, was the source of the word 'electricity'.Electrostatic phenomena arise from the forces that electric charges exert on each other.

Lunar soil is the fine fraction of the regolith found on the surface of the Moon.Its properties can differ significantly from those of terrestrial soil.The physical properties of lunar soil are primarily the result of mechanical disintegration of basaltic and anorthositic rock, caused by continuous meteoric impacts and bombardment by interstellar charged atomic particles over years.

Creating electrostatic charge by contact and separation of materials is known as "triboelectric charging." The word "triboelectric" comes from the Greek words, tribo – meaning "to rub" and elektros – meaning "amber" (fossilized resin from prehistoric trees). It involves the transfer of electrons between materials.
